SUMMARY

AI-first AI Builder with nearly 3 years of hands-on Python experience building and shipping LLM-powered agentic solutions for real business problems. Works with business and ops teams to find the problem, ships a working v1 using AI coding tools (Claude Code, Cursor), agents and no-code (n8n, Relevance AI), and iterates until it is used. Delivered measurable impact: research time cut from ~40 minutes to under 5, manual QA effort cut by ~50%, AI response accuracy improved by ~60%. Builds evaluations and guardrails and debugs production agent failures.

SKILLS

AI-first development: Claude Code, Cursor, AI coding tools, agents, no-code, n8n, Relevance AI, prototyping, automation

Agentic workflows: multi-agent and supervisor-agent pipelines, tool calling, function calling, multi-step workflows, multi-turn state management, LangChain, MCP server development

RAG and data: RAG pipelines, embeddings, vector stores (FAISS, Chroma, Qdrant), NL-to-SQL querying, SQL

Integration: REST APIs, webhooks, headless API automation, Flask, third-party platform integrations

Evaluations and guardrails: test-set design, scoring criteria, A/B testing, guardrail design, hallucination reduction, production debugging

Languages and tools: Python, SQL, Git, GCP, Playwright

WORK EXPERIENCE

AI Engineer, Plasma, Noida, India (Hybrid) Apr 2026 - Present

- Shipped supervisor-agent pipelines with GPT-4.1 across 8+ agents, standardizing prompt variable systems so agents are configured consistently and repeatably.
- Built a no-code MCP server that exposes internal platform connections as callable tools for Claude, letting AI models invoke business APIs without custom integration code.
- Investigated and resolved production agent failures (hallucinated writes, cross-agent context loss, multi-turn state failures), improving AI response accuracy by ~60%.
- Automated workflows with headless API integrations for 4 enterprise platforms (Salesloft, Outreach.io, Assembla, ServiceNow) and built NL-to-SQL and vector search pipelines (Qdrant + GPT-4.1-mini) over 65,000+ product records.
- Built a Playwright-based automated testing tool for AI modules with CSV-driven inputs and pass/fail reporting, cutting manual QA effort by ~50%.
- Used Claude Code and Cursor by default to build and debug all of the above.

AI Engineer, Xapotech Systems Pvt Ltd, Noida, India Nov 2023 - Mar 2026

- Built RAG pipelines (LangChain + FAISS) and API integrations that connected LLM systems into production workflows.
- Worked with stakeholders to turn ambiguous business requirements into structured, evaluated prompt instructions and working prototypes.
- Ran systematic A/B testing against defined evaluation criteria and designed guardrail prompts to reduce hallucinations before shipping.

PROJECTS

RT Sales Copilot Agent Python, Relevance AI

- Converted a manual pre-call research process into an AI workflow with a multi-stage prompt pipeline and API integrations, cutting research time from ~40 minutes to under 5.

AI Research Assistant Python, LangChain, Groq, Chroma, HuggingFace, Gemini API

- Built a multi-document RAG system with an evaluation program: curated a ground-truth test set, wrote scoring criteria, and A/B tested prompt and retrieval variants, improving first-hit answer accuracy from ~60% to 87%.

Smart Calendar Scheduling Agent Python, Flask, n8n

- Built an agent with tool calling and multi-turn state management, covering ambiguous intent, conflicting constraints and mid-session corrections through structured testing before deployment.

EDUCATION

B.Tech in Computer Science, Jaypee Institute of Information & Technology, Noida, India 2019 - 2023

CERTIFICATIONS

Building with the Claude API, Anthropic (2026) | Generative AI, Udemy (2024)
